

Ambi Gupta

Product Architect & Technical Lead – Cloud, Backend & Platform Engineering

Mumbai, India | aambigupta@gmail.com | +91 9987848971

PROFESSIONAL SUMMARY

Product Architect & Technical Lead with 14+ years of experience driving outcome-focused, customer-centric engineering solutions across fintech and regulated domains. Proven expertise in defining product architecture blueprints, architectural roadmaps, and leading cross-functional teams to deliver high-value, cloud-native platforms (Azure, AWS) using lean, iterative methodologies. Strong hands-on architect with deep proficiency in .NET Core, C#, microservices, Domain-Driven Design (DDD), and modern DevSecOps practices including Blue-Green/Canary deployments and SRE principles. Adept at translating business requirements and NFRs into scalable technical solutions while mentoring engineering teams and ensuring production-grade reliability, performance, and compliance. Track record of delivering solutions with 99.9% uptime, processing 800+ RPS, and reducing deployment cycles by 60%.

CORE COMPETENCIES

Product & Architecture:

Product Architecture Blueprints • 4+1 Architectural Model • Business Context Diagrams (BCD) • Integration Architecture • Architecture Decision Records (ADR) • NFR Definition & Enforcement • Domain-Driven Design (DDD) • Clean Architecture • SOLID Principles • Microservices Architecture • Event-Driven Architecture • RESTful API Design • CQRS Pattern

Backend & Development:

.NET Core (.NET 6–8) • C# • Async/Await • LINQ • Dependency Injection • ADO.NET • Entity Framework Core • Dapper • NodeJS (Working Knowledge) • Python (Working Knowledge) • Golang (Exposure) • Blazor • Angular • React • REST APIs • GraphQL (Exposure)

Cloud & DevOps:

Azure (App Services, Functions, Service Bus, APIM, AKS, Blob Storage, DevOps) • AWS (EC2, Lambda, S3 - Working Knowledge) • FaaS/PaaS Architecture • Docker • Kubernetes (AKS) • CI/CD Pipelines • Azure DevOps (ADO) • GitHub Actions • Jenkins • Octopus Deploy • Infrastructure as Code (IaC)

Methodologies & Practices:

Agile (Scrum, Kanban) • Lean Software Development • SAgile (Scaled Agile Framework) • DevSecOps • Site Reliability Engineering (SRE) • Continuous Integration/Continuous Deployment • Blue-Green

Deployment • Canary Releases • A/B Testing • Test-Driven Development (TDD) • Behavior-Driven Development (BDD)

Security & Integration:

OAuth2 • JWT • Authentication & Authorization • Secure API Design • PCI-DSS Compliance • ISO 20022 • SWIFT Integration • Message Queuing • API Gateway Pattern

Data & Performance:

SQL Server 2022 • PostgreSQL • Query Optimization • Database Sharding • Indexing • High-Throughput Transaction Systems • Caching Strategies (Redis) • Performance Tuning • Database Design & Modeling

Observability & Quality:

Datadog APM • AppDynamics • Distributed Tracing • Metrics & Monitoring • Logging & Log Aggregation • SonarQube • Code Quality Gates • Automated Testing (Unit, Integration, Performance) • Code Coverage Analysis

AI/ML & Emerging Technologies:

GitHub Copilot • Cursor AI • AI-Assisted Development • LLM Prompt Engineering • Azure Cognitive Services (Exposure) • ML.NET (Exposure)

AWARDS & RECOGNITION

Outstanding Performer – Three Consecutive Years (2022, 2023, 2024)

ARCHITECTURE & TECHNICAL LEADERSHIP

- Defined product architecture blueprints including Business Context Diagrams (BCD), 4+1 architectural views (logical, process, physical, development, scenarios), and integration architecture aligned with business outcomes, customer needs, and NFRs
- Drove outcome-driven engineering culture focused on delivering customer value through lean, iterative delivery, rapid experimentation, and continuous improvement, reducing time-to-market by 40% on average
- Owned end-to-end system architecture for enterprise .NET platforms, covering scalability, security, observability, fault tolerance, and disaster recovery strategies
- Collaborated with cross-functional teams including product management, UX/UI, delivery, infrastructure, and security to ensure architectural feasibility, business viability, and alignment with organizational goals
- Championed DevSecOps and SRE practices including Blue-Green/Canary deployments, automated testing, infrastructure-as-code, and continuous monitoring, achieving 99.9% uptime and sub-second incident detection
- Led design reviews, architecture decision records (ADR), and enforced coding standards ensuring adherence to DDD, microservices best practices, and clean architecture principles

- Mentored senior and mid-level engineers (teams of 6-12), driving technical excellence, delivery accountability, and engineering craftsmanship through hands-on code reviews and pair programming
- Partnered with business stakeholders to translate business/user needs and UX/UI designs into technical requirements, ensuring solutions deliver tangible value and ROI

PROFESSIONAL EXPERIENCE

LTIMindtree | Technical Lead & Product Architect

May 2021 – Present | Mumbai, India

- Architected and delivered enterprise-scale REST APIs handling 800+ requests/second with 99.9% uptime, serving critical fintech operations for leading financial institutions
- Modernized legacy monolithic systems into containerized microservices using .NET Core, Dapper, Docker, and Azure Kubernetes Service (AKS), improving deployment velocity by 60% and reducing infrastructure costs by 35%
- Designed event-driven architectures using Azure Service Bus, Azure Functions, and API Management (APIM), enabling real-time processing of 100,000+ daily transactions with sub-2-second latency
- Led cross-functional team of 6+ engineers, establishing code review standards, architectural governance, and mentoring on clean architecture, DDD, and microservices patterns
- Implemented comprehensive DevSecOps pipeline with SonarQube integration, automated security scanning, and quality gates, achieving 85% code coverage and reducing production defects by 40%
- Built CI/CD pipelines using Azure DevOps (ADO) and Octopus Deploy, reducing release cycles from 3 days to 4 hours and enabling weekly production deployments
- Optimized SQL Server performance via strategic indexing, query refactoring, and database sharding, achieving 30-45% improvement in query response times and enabling horizontal scalability
- Integrated DataDog APM for distributed tracing, real-time monitoring, and proactive incident resolution, reducing MTTR (Mean Time to Resolution) from 2 hours to 20 minutes
- Collaborated with product management to define architectural roadmap aligned with business goals, delivering customer-centric solutions that increased user satisfaction scores by 25%

Tech Stack: .NET 8, SQL Server 2022, Dapper, Azure API Management, Azure Service Bus, Azure Functions, AKS, Docker, DataDog, Octopus Deploy, SonarQube, Azure DevOps

PROJECT 1: Enterprise API Platform – Fintech

Client: Leading Financial Services Provider | Duration: May 2021 – Present

- Architected RESTful APIs using Clean Architecture and CQRS patterns, supporting 800+ requests/second with multi-tenant isolation and tenant-based routing for enhanced security and scalability
- Implemented database sharding strategy and horizontal partitioning, enabling platform to scale from 50,000 to 500,000+ daily active users without performance degradation
- Defined product architecture blueprint using 4+1 model covering logical view (microservices decomposition), process view (async workflows), development view (team structure), physical view (Azure deployment), and scenarios (use cases)
- Reduced deployment cycles from days to hours through automated CI/CD pipelines, Blue-Green deployment strategy, and containerized deployments with zero-downtime releases
- Optimized SQL Server performance via strategic indexing, stored procedure refactoring, and query plan analysis, achieving 30-45% improvement in P95 latency and 60% reduction in database CPU utilization
- Integrated DataDog APM for distributed tracing and monitoring across 20+ microservices, enabling real-time performance analysis and proactive bottleneck identification
- Increased automated test coverage to 85% through comprehensive unit, integration, and contract testing strategies, reducing regression defects by 50%
- Collaborated with business stakeholders to deliver outcome-driven solutions, resulting in 30% faster customer onboarding and \$2M annual cost savings through infrastructure optimization

Tech Stack: .NET 8, SQL Server 2022, Dapper, Azure API Management, DataDog, Docker, Octopus Deploy, SonarQube

PROJECT 2: Insurance Marketplace Platform

Client: Mantralabs | Role: Technical Lead & Product Architect

- Architected microservices-based insurance marketplace enabling users to compare and purchase vehicle insurance from 10+ providers, processing 50,000+ quotes monthly with 99.5% success rate
- Implemented Ocelot API Gateway for intelligent routing, authentication/authorization, and API aggregation across third-party insurance APIs, reducing integration complexity by 70%
- Designed modular integration framework with adapter pattern and plugin architecture, reducing new partner onboarding from 4 weeks to 5 days and enabling business to scale provider network rapidly
- Built automated CI/CD pipelines using GitHub Actions and Jenkins with comprehensive security scanning (SAST/DAST), quality gates, and automated rollback mechanisms
- Reduced quote retrieval time from 8-12 seconds to under 3 seconds through parallel processing, intelligent caching strategies (Redis), and asynchronous API calls to provider systems
- Led cross-functional team of 6 engineers ensuring adherence to architectural standards, code quality benchmarks, and delivery timelines, achieving 95% sprint commitment success rate
- Implemented comprehensive observability with structured logging, distributed tracing, and business metrics dashboards, enabling data-driven optimization and proactive issue resolution

Tech Stack: .NET 8, SQL Server 2022, Microservices, Ocelot API Gateway, Redis, GitHub Actions, Jenkins, Docker, Azure App Services

AGS Transact Technologies | Associate Manager – Product Architect

Nov 2018 – Nov 2020 | Mumbai, India

- Led cross-functional engineering team of 12+ including developers, QA, DevOps, and operations delivering BP5000 and MPOS platforms supporting 100,000+ daily transactions across banking and payment services
- Architected comprehensive banking platform supporting Balance Inquiry, Interbank Fund Transfer (IBFT), Bill Payments, Mobile Top-Up (ELoad), Cash-In/Out, and PIN Management with sub-3-second response times
- Implemented SWIFT integration for secure interbank transactions with full ISO 20022 compliance, enabling seamless cross-border payments and real-time settlement
- Built web-based admin portal with Role-Based Access Control (RBAC), real-time MIS reporting, agent management, transaction monitoring, and operational dashboards serving 500+ concurrent admin users
- Achieved 99.8% transaction success rate through robust error handling, intelligent retry mechanisms, circuit breaker patterns, and fallback workflows for third-party dependencies
- Designed and implemented PCI-DSS compliant workflows with end-to-end encryption, tokenization, HSM integration, and comprehensive audit trails, passing security audits with zero critical findings
- Collaborated with product owners to translate business requirements into technical architecture, delivering solutions that increased transaction volume capacity by 3x and reduced operational costs by 25%

Tech Stack: .NET Core, SQL Server 2022, Entity Framework Core, SWIFT ISO 20022, REST APIs, Redis, Octopus Deploy, Azure DevOps

PROJECT 3: Banking & Payments Platform (BP5000 & MPOS)

Client: RCBC – Philippines | Duration: Nov 2018 – Nov 2020

- Delivered mission-critical banking platform processing 100,000+ daily transactions with stringent SLA requirements (99.8% uptime, sub-3-second response time)
- Implemented comprehensive banking services portfolio: Balance Inquiry, IBFT, Bill Payments, E-Load, Cash-In/Out, PIN Management with secure multi-factor authentication
- Integrated SWIFT messaging for secure interbank communication with full ISO 20022 compliance, handling remittances, settlements, and cross-border transactions
- Built scalable web admin portal supporting 500+ concurrent users with real-time dashboards, transaction monitoring, agent management, and comprehensive MIS reporting

- Achieved PCI-DSS Level 1 compliance through secure architecture design, end-to-end encryption, HSM integration, tokenization, and comprehensive security controls

Tech Stack: .NET Core, SQL Server 2022, Entity Framework, SWIFT, REST APIs, Octopus Deploy

PROJECT 4: Mobile Payments & Digital Wallet Platform

Client: Thawani Pay (Oman) | Role: Associate Manager – Product Architect

- Engineered backend APIs for digital wallet platform supporting utility payments, merchant transactions, fuel purchases, and peer-to-peer transfers, processing 10,000+ daily transactions
- Integrated multiple payment gateways with intelligent routing, failover mechanisms, and automated reconciliation, achieving 99.5% transaction success rate and 98% customer satisfaction
- Implemented PCI-DSS compliant payment flows with tokenization, fraud detection mechanisms, velocity checks, and real-time risk scoring to minimize fraudulent transactions
- Optimized platform performance to handle peak loads (3,000+ concurrent transactions) with sub-2-second average response time through caching, connection pooling, and async processing
- Built comprehensive API documentation, integration guides, and SDK samples, reducing merchant integration time from 2 weeks to 3 days

Tech Stack: .NET Core, SQL Server, Entity Framework, REST APIs, Payment Gateway SDKs, Redis, Azure App Services

SS&C Technologies | Associate Manager

Nov 2017 – Nov 2018 | Mumbai, India

- Delivered critical modules for large-scale financial platforms serving global investment management clients
- Collaborated with cross-functional teams across development, QA, and operations to ensure on-time delivery
- Implemented performance optimizations and code refactoring initiatives improving system responsiveness by 20%

Rave Technologies | Senior Software Engineer

May 2016 – Nov 2017 | Mumbai, India

- Developed application modules across full SDLC for enterprise clients in banking and insurance domains
- Contributed to architecture decisions and technical design reviews for new product features

Mphasis | Software Engineer

May 2014 – May 2016 | Mumbai, India

- Developed and supported enterprise application modules for leading financial services clients
- Participated in Agile ceremonies and contributed to continuous improvement initiatives

Evision Technologies | Software Engineer

Sep 2011 – May 2014 | Mumbai, India

- Developed application components following software engineering best practices and design patterns
- Supported production stability through proactive monitoring and rapid issue resolution

EDUCATION

MBA (Information Technology) – Welingkar Institute of Management Development & Research, Mumbai

Bachelor of Science in Information Technology (BSc IT) – LS Raheja College of Arts & Commerce, Mumbai
